

Data Migration – Changing systems doesn't mean losing data

Today's legal practice relies on IT Support systems and as importantly on data repositories to manage back office systems and case loads. It is little wonder when considering replacement systems migration of this valuable data is high in the minds of all concerned. A practice cannot afford to lose data they have invested time in compiling and that may also be required for ongoing compliance and audit purposes.

Linetime have been migrating data to their legal software solutions for twenty years. At the outset the complexities revolved around the physical transfer of data from disparate media types and operating systems but the data itself was relatively simple. Today these elements are reversed. With operating systems and database technologies becoming increasingly open the physical transfers have simplified however the volumes and complexities of data have increased.

Our technical teams have developed utilities to assist in data migration. In addition they have a wealth of experience in defining the mechanisms for data transformation, and fully understand the complexities and impact the process has on a practice. They also offer guidance to the practice to assist in the management of this vital process.

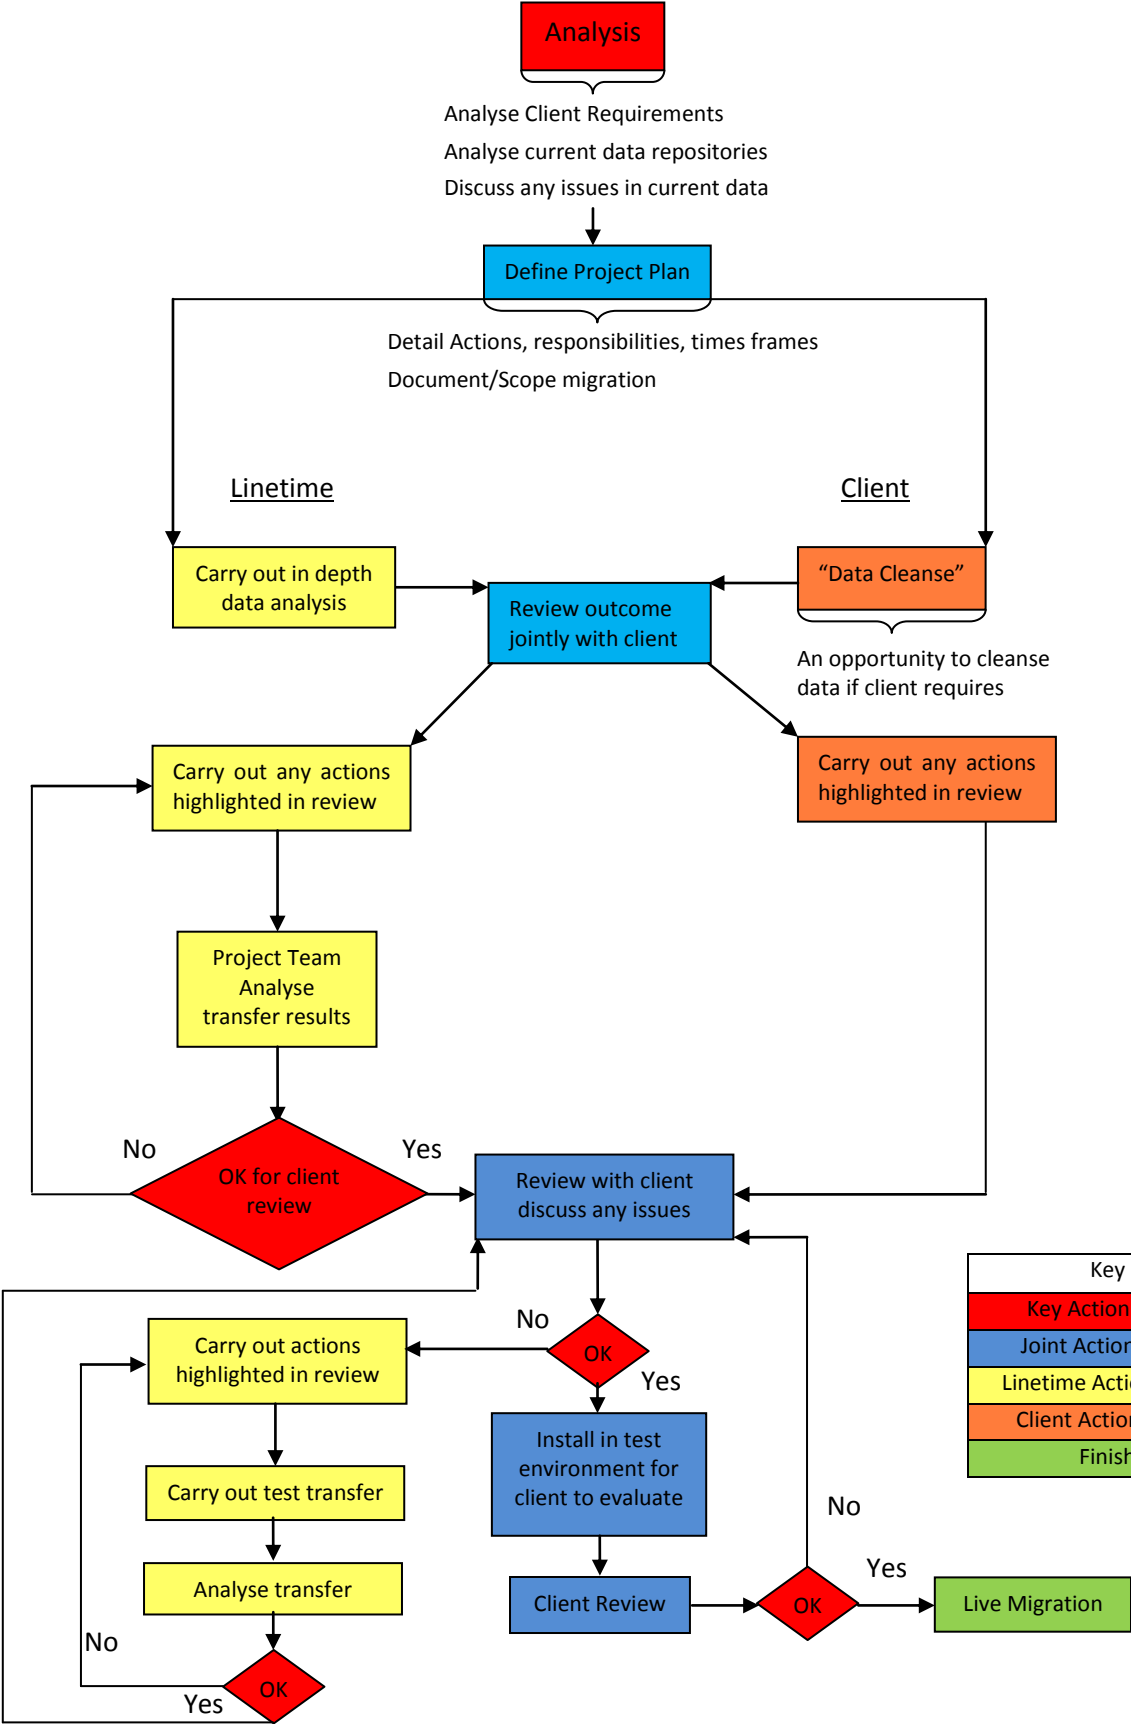

This wealth of knowledge has come about by one simple factor – **Experience**.

Linetime have transferred data from the following systems:

Aim	Miles	Civica
Axxia	Olivetti	Avenue
Opsis	Eclipse	TFB
Fathom	Timeslice	Norwell
Videss		

Should you wish to know more about Linetime's data transformation services and how they can assist in transferring to Linetime's legal solutions please email data@linetime.co.uk for more information or call on 0113 250 0020.
