

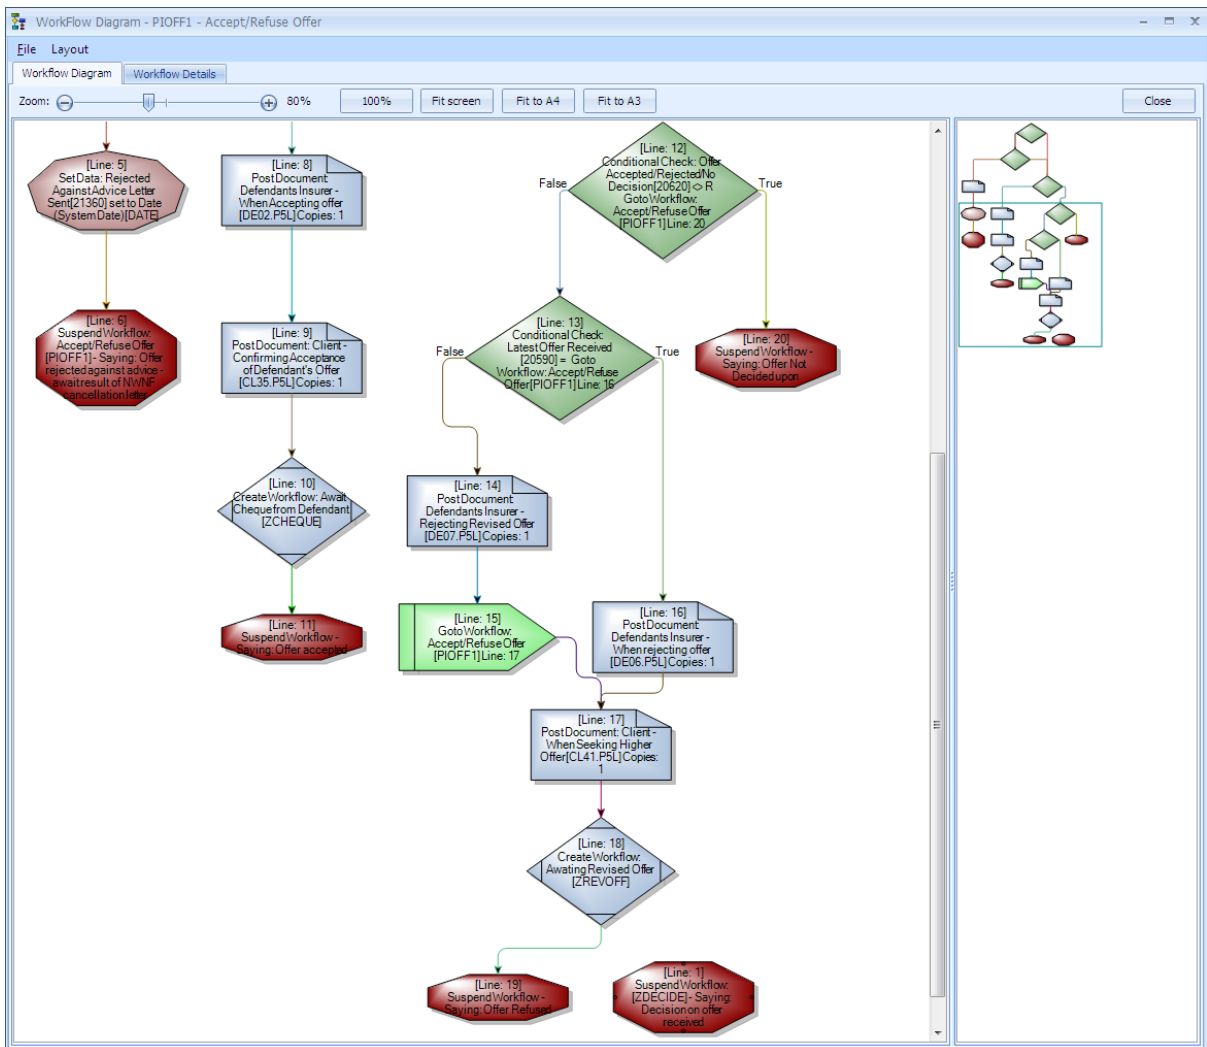

### Graphical Workflow.

The Linetime workflow designers module provides the very latest in rapid workflow deployment.

The ability to work graphically is a significant factor for system designers. Graphical representation of workflow simplifies the design process, improves communication with the end user and aids the production of system documentation.

Users can be provided with a “visual” representation of their processes that indicates how those processes inter relate. Connected processes can be accessed by simply drilling down through the heirarchy.

For more information about Linetime [case management](#) systems please contact Phil Snee on 0113 2500020 or email [web@linetime.co.uk](mailto:web@linetime.co.uk).
